ANNEX 1

Reports and other documents resulting from previous Joint Meetings Of the FAO Panel of Experts on Pesticide Residues in Food and the Environment and WHO Expert Groups on Pesticide Residues

This volume contains toxicological monographs that were prepared by the 2005 Joint FAO/WHO Meeting on Pesticide Residues (JMPR), which met in Geneva from 20–29 September, 2005.

The monographs in this volume summarize the safety data on 15 pesticides that could leave residues in food commodities. These pesticides are acephate, azocyclotin, benalaxyl, carbendazim, chlorpropham, clofentezine, cyhexatin, dimethanamid-P/racemic dimethenamid, ethoxyquin, fenhexamid, imazalil, indoxacarb, novaluron, propamocarb and sulfuryl fluoride. The data summarized in the toxicological monographs served as the basis for the acceptable daily intakes and acute reference doses that were established by the Meeting.

This volume and previous volumes of JMPR toxicological evaluations, many of which were published in the FAO Plant Production and Protection Paper series, contain information that is useful to companies that produce pesticides, government regulatory officers, industrial testing laboratories, toxicological laboratories and universities.
